TA-53 POLICY STATEMENT 300-00-01

October 1, 1999

SAFETY REVIEWS

1.0 Purpose and Scope

This policy establishes requirements for ES&H reviews of new and significantly modified R&D activities. It applies to all high or medium initial risk R&D projects, experiments, and accelerator development tests at TA-53. User experiments are addressed in 53 FIR 300-00-01, *Technical and Safety Review of User Experiments at LANSCE*.

2.0 Policy

2.1 To ensure NEPA coverage and ES&H input to the planning process, ESH-ID process shall be applied to all projects and non-user experiments. (Note that some project-scale user experiments may need to use the ESH-ID planning tool; Proton Radiography is an example.) Results of the ESH-ID process must be considered during the hazard identification step of Safe Work Practices and during the development of authorization basis.

2.2 New and significantly modified activities shall be approved only after independent review per a process specified by the Landlord. LANSCE Facility Management shall be notified of the intent to conduct such a review and shall be copied on review reports
